Department of Food Science and Technology

Date: 11 – 03 – 2021

PROGRAM REPORT

Name of the Program: A guest lecture on Food preservation

Date/Duration: 09 – 03 – 2021 (one day)

Resource Person: Mr. K. Ramesh, RM

Name of Coordinator: Smt. A. Jyothi Theresa, Head of the Department

Number of Participants: 42

Program objectives:

- Temperature control
- moisture control
- Ph control

Topics covered: Food preservation is the process of preventing food spoilage and extending its shelf life. It is a crucial aspect of the food industry as it ensures that food is safe to consume and can be stored for an extended period. The objectives and principles of food preservation have evolved over time, and this blog aims to provide you with a comprehensive guide.

Program outcomes:

Food preservation is a vital aspect of the food industry, and understanding the objectives and principles behind it is crucial. By controlling temperature, moisture, pH, and using chemical preservatives, we can extend the shelf life of food and maintain its nutritional value. As food preservation technology continues to evolve, we can expect even more innovative methods to emerge.

PROGRAM REPORT

Name of the Program: A guest lecture on **Drone Technologies**

Date/Duration: 14-02-2021 (one day)

Resource Person: Mrs. B. Asha

Name of Coordinator: B. Chinna babu

Number of Participants: 42

Program objectives:

- improved efficiency
- Enhanced crop yields
- Reduced costs
- Improved accuracy

Topics covered: drone technology has become increasingly popular in the agriculture sector. Drones offer farmers a range of benefits, including increased efficiency, improved yields, and reduced costs. However, there are concerns that farmers may be reluctant to adopt drone technology due to fears of job loss or a lack of knowledge and training. We can explore the benefits of drone technology in the agriculture sector and the challenges that may be holding farmers back from adopting this technology.

Program outcomes:

Agriculture drones can see which plants reflect different amounts of green light and Near-infrared spectroscopy (NIRS) light. This data helps produce multispectral images to track crop health. Quick monitoring and discoveries of any defects can help save crops.

PROGRAM REPORT

Name of the Program: A guest lecture on **Up-lifting the life of farmers by incorporating new age implements into traditional agriculture**

Date/Duration: 29 – 01 – 2021 (one day)

Resource Person: Mr. Swami Naidu, CEO

Name of Coordinator: B. Chinna babu

Number of Participants: 42

Program objectives:

- Business as usual' agriculture is not an option for the future.
- Different types of farmers need different adaptation and development options.
- Many current farmers are likely to exit agriculture.

Topics covered: One of the greatest challenges humanity faces is feeding the world's human population in a sustainable, nutritious, equitable and ethical way under a changing climate. Urgent transformations are needed that allow farmers to adapt and develop while also being climate resilient and contributing minimal emissions. This paper identifies several illustrative adaptation and development pathways, recognising the variety of starting points of different types of farmers and the ways their activities intersect with global trends, such as population growth, climate change, rapid urbanisation dietary changes, competing land uses and the emergence of new technologies. The feasibility of some pathways depends on factors such as farm size and land consolidation.

Program outcomes:

This paper explores possible pathways for different types of farmers, considering where they might be in the future, beyond 2030 and the era of the SDGs. It outlines some of the necessary interventions, risks and trade-offs associated with these different pathways, for farmers operating in a variety of agricultural systems globally, including cropping, livestock and tree (silvopasture) systems.
